### The activPilot standard

In developing activPilot we created all the solutions needed for the next-generation window fitting standard within a single system. An intelligent, clearly structured modular system with far less components than was previously typical, activPilot meets all requirements placed on a modern range of fittings. activPilot is suitable for any shape of window, any window material and any level of automation, from manual mounting to fully automated serial production. The high level of flexibility, the attractive auxiliary functions, the new locking system and the functional design all ensure that your business is perfectly geared today to meet your customers' needs and future requirements.

easy Pilot – the turn fittings that are popular all over the world

The comprehensive fitting range for turn windows from Winkhaus offers numerous solutions that are sought after particularly in international markets. The high level of operating convenience and the sturdy Winkhaus quality convince customers worldwide.

|--------------------------------|--|
| Component type                 | Mortice cremone                                |
| Window material                | Aluminium<br>wood<br>plastic<br>steel          |
| Sash fitting groove            | 16 mm hardware groove                          |
| Mounting side                  | DIN left<br>DIN right                          |
| Opening type / switch sequence | Turn<br>Top tilt handle<br>Lateral tilt handle |
| Backset                        | 15.5 mm  |
| Handle position                | in the middle                                  |
| Lockable                       | no   |
| min. sash rebate height        | 920 mm   |
| max. sash rebate height        | 1,319 mm                                       |
| Number of locking points       | 3  |

|                   |                       |
|-------------------|-----------------------|
| Lock point design | Octagonal bolt        |
| colour            | Silver                |
| Surface           | Galvanised            |
| Stroke direction  | in the same direction |
| Drive Stroke      | 19                    |
| Clamping          | yes                   |
| Connectable       | no                    |
| Gearbox design    | one piece             |
| Anti-Lift Device  | no                    |
| Packaging         | Reusable              |

### Mortice drive

The mortice drive is mounted in the fitting groove which requires a cut-out in the window sash for the gear case. The drive unit is switched via the window handle and transmits the movement of the handle to all other components of the window fitting, so that the window can be brought into its various positions.

### Note

For the intended use, please take into account the information from the fitting lists, mounting instructions and application diagrams.
